

The figure consists of a 5x2 grid of astronomical plots. Each plot shows a small portion of the sky centered on a specific coordinate. The plots are labeled as follows:

- Row 1: 1361 (Equatorial), 1362 (Equatorial), 1363 (Equatorial), 1364 (Equatorial)
- Row 2: 1365 (Equatorial), 1366 (Equatorial), 1367 (Equatorial), 1368 (Equatorial)
- Row 3: 1369 (Equatorial), 1370 (Equatorial), 1371 (Equatorial), 1372 (Equatorial)
- Row 4: 1373 (Equatorial), 1374 (Equatorial), 1375 (Equatorial), 1376 (Equatorial)
- Row 5: 1377 (Equatorial), 1378 (Equatorial), 1379 (Equatorial), 1380 (Equatorial)

In each plot, a central crosshair (+) indicates the field center, and black dots of varying sizes represent stars of different apparent magnitudes. The plots show a variety of star distributions, from sparse fields to those with prominent stellar concentrations.
